COMMUNITY BATTERIES ACROSS NSW

A Minns Labor Government will deliver more stability and reliability in our state’s energy supply by building community batteries.

Community batteries allow homes within a neighbourhood to store excess power generated during the day from their rooftop solar panels.

The stored power can be used later in the evening when demand on the electricity network is traditionally higher.

It also means that families can use more of the power that they actually generate, particularly at night, lowering their overall energy bills.

It will also take pressure off the grid during periods of peak demand.

New South Wales has the lowest rate of households with solar energy systems out of any state – 26.6 per cent.

Of that, 1 in 60 households have a battery to store the energy they produce from their panels.

The community batteries will be delivered through the NSW Energy Security Corporation.

The NSW Energy Security Corporation will work with the Commonwealth and industry to ensure that NSW gets an outsized share of community batteries to deliver lasting cost-of-living relief to NSW families.
